# **Six** reasons to choose HPE Storage Tape and boost your data protection

HPE GreenLake

The value of HPE Storage Tape

Powerful insight and management tools

Take your tape library to another dimension with HPE Command View for Tape Libraries. The HPE Command View for Tape Libraries suite of software products provide performance and diagnostic information for proactive alerting, capacity planning and remote monitoring of performance and diagnostics. It allows you to manage every HPE Storage Tape Library in your environment – from a single, web-based pane of glass – wherever you are in the world. You can review backup logs, check drive status, receive alert notifications and diagnose problems, from your centralised dashboard.

HPE GreenLake Flex Solutions built for Tape Libraries

HPE GreenLake Flex Solutions built for Tape Libraries creates a new paradigm for HPE Storage Tape users by offering consumption-based pricing: you only pay for the tape capacity you use and avoid paying for over-provisioned solutions. You can monitor capacity and performance precisely to allow for more timely upgrades. Instead of a big initial capital outlay, therefore, this flexibility allows you to spread the acquisition and operational cost of tape over a longer period.

Additional peace of mind with HPE MSL Encryption Kit

The HPE MSL Encryption Kit is specifically designed to be an easy and affordable library-enabled solution for growing businesses. It provides a self-contained solution for MSL tape libraries with no additional software, PCs or servers required or involved.

No hidden licensing fees for upgrading your tape system

HPE Storage Tape solutions are designed to be easy to upgrade and expand as your needs change. The modular architecture of the HPE Storage MSL3040 and HPE Storage MSL640 tape libraries allow you to deploy infrastructure faster, simplify lifecycle operations and increase productivity with automated backup and archiving routines and seamless upgrades. Plus, uniquely, HPE does not charge additional licence fees for installing new drives in an existing library, which makes it easy to upgrade and re-use older drives in a new, larger system.

Compatibility and interoperability

All HPE Storage Tape drives, tape libraries and media are qualified to be compatible and interoperable with a wide range of technologies from other manufacturers. By certifying and qualifying key backup and archival software, operating systems, interfaces and servers, HPE can help assure our customers of wide interoperability with other third-party systems and solutions.

Flexible purchase options with HPE Financial Services

With HPE Financial Services, you can finance new HPE Storage Tape equipment without over-stretching cash flow or having to find CapEx finance upfront. In many cases, a flexible finance solution from HPE Financial Services costs you less over the full term than buying the equipment outright.
